

Dana Levy ? Curriculum Vitae

#Personal Information

- Full Name: Dana Levy

#Summary

Senior Security Engineer with 5 years of experience in offensive security, threat hunting, and zero-trust architecture design. Specialized in cloud security, identity protection, and penetration testing across enterprise environments. Proven track record of leading red team operations and building automated security tooling. Passionate about proactive defense and open-source security research.

#Work Experience

##Senior Security Engineer ? CyberArk

March 2022 ? Present | Petah Tikva, Israel

- Leading offensive security research and zero-trust architecture for enterprise identity protection platforms.

##Security Analyst ? Check Point Software Technologies

July 2020 ? February 2022 | Tel Aviv, Israel

- Performed vulnerability assessments and penetration testing on network appliances and cloud firewalls.

#Education

##Master of Science in Computer Science ? Technion - Israel Institute of Technology

2018 ? 2020 | GPA: 92/100

- Specialization: Cybersecurity and Cryptography.

#Technical Skills

Programming Languages: Python, Go, C, Bash, PowerShell

Security Tools: Burp Suite, Metasploit, Nmap, Wireshark, IDA Pro, Ghidra, YARA, Sigma

SIEM & Detection: Splunk, Elastic SIEM, Suricata, Snort, CrowdStrike Falcon

Cloud Security: AWS Security Hub, Azure Sentinel, GCP Security Command Center, Terraform (security-as-code)

Identity & Access: CyberArk PAM, HashiCorp Vault, OAuth 2.0, SAML, FIDO2

DevSecOps: Docker, Kubernetes security, GitHub Actions, SonarQube, Trivy, Checkov

Databases: PostgreSQL, MongoDB, Elasticsearch

Networking: TCP/IP, DNS, TLS/SSL, VPN, Zero-Trust Architecture, Micro-segmentation

#Projects

##Zero-Trust Network Architecture (CyberArk)

Designed and implemented a zero-trust segmentation framework for enterprise identity platforms. The system enforces least-privilege access across 50+ microservices using mutual TLS and SPIFFE/SPIRE identity. Reduced lateral movement attack surface by 60%. Technologies: Go, Envoy Proxy, SPIFFE, Kubernetes, Terraform.

##Automated Threat Intelligence Platform (CyberArk)

Built an end-to-end threat intelligence aggregation platform ingesting 500K+ indicators of compromise daily from OSINT feeds, commercial threat intel, and internal honeypots. Automated enrichment and correlation with Splunk SIEM. Technologies: Python, Apache Kafka, Elasticsearch, Splunk, Docker.

##Red Team Automation Framework (CyberArk)

Developed an internal red team automation toolkit for simulating APT campaigns. Includes custom C2 infrastructure, phishing simulation, and automated reporting. Used in 20+ enterprise engagements. Technologies: Python, Go, Cobalt Strike, Docker.

##Open-Source: CloudSec Scanner

Created an open-source cloud security misconfiguration scanner for AWS and Azure. Checks IAM policies, S3 bucket permissions, network ACLs, and encryption settings. 200+ stars on GitHub. Technologies: Python, Boto3, Azure SDK.

##Academic Thesis: Adversarial ML on IDS

Developed novel evasion techniques against ML-based network intrusion detection systems using GANs. Demonstrated 85% evasion rate against state-of-the-art models while maintaining traffic validity. Published in IEEE S&P Workshop. Technologies: Python, PyTorch, Scapy.

#Certifications

1. OSCP ? Offensive Security Certified Professional (June 2021, Offensive Security)

#Languages

- Hebrew: Native

#Interests

- Bug bounty hunting (HackerOne top 100 in Israel)
